

Volume One

Issue Three

presents
3-D Scansion!!!™

At **xylostyle**, we believe in the chromatic as well as in the iambic power of poetry. That's why we've developed **3-D Scansion!!!**, which launches versification into a completely different dimension. And now *you* can enjoy this literary breakthrough right there in the privacy of your own home or office.

It's this simple: First, print this page onto heavy paper stock and cut out the colored squares from the viewer template below. Next, get some red and blue cellophane. Measure and trim squares of each to fit the cutouts. Paste or tape them onto the viewer template, using red for your left eye and blue for your right. Cut out the template, hold it between your thumb and forefinger, and you're ready to go!

To truly experience the amazing wonders of **3-D Scansion!!!**, we suggest that you close the windows, draw the curtains, and dim the lights.

refrain

how quickly
the air becomes still-
soundwaves slowing
to a flattened crawl
lowtones lumbering
forming waves
deepthru delays
encircling energy
interlacing oscillation
softly projecting
harmonic shadows
that comfort and caress
until the wind awakens
and brittle frequencies
reappear.

jfb/june 2001
